DETAILED ACTION

1. Claims 1-19 are presented for examination. Claims 6-10 and 16-19 are withdrawn from further consideration by the amendment filed on 9/20/04, as being drawn to a non-elected invention.

- 2. The text of those applicable section of Title 35, U.S. Code not included in this action can be found in the prior Office Action.
- 3. Claims 1-5 and 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Oki (Oki), U.S. patent no. 5,870,595.

As per claim 1, Oki discloses a line card circuit comprising:

an activity latch [66, fig. 2] for holding an activity flag value [col. 5, lines 8-25];

a logic element [83, fig. 1] operatively coupled to the activity latch to receive an incoming clock signal and to provide an outgoing clock signal, the outgoing clock signal being dependent on the activity flag value [figures, 1 and 2; col. 5, lines 8-29; emphasis added, "signal 54 is generated based on an value detected by detecting unit 66, and output to an AND logic circuit 83 to control an output of a clock signal 6"].

As per claim 2, Oki discloses the activity flag value is mutually exclusive with a second activity flag value held in a second activity latch [81a, 81b, fig. 8] of a second line card circuit [col. 11, lines 56-61].

As per claim 3, Oki discloses the logic element passes the incoming clock signal as the outgoing clock signal when the activity flag value has a first value [col. 5, lines 25-29; col. 11, lines 34-37].

Application/Control Number: 09/636,115

Art Unit: 2115

As per claim 4, Oki discloses the logic element blocks the incoming clock signal when the activity flag value has a second value [col. 5, lines 25-29; col. 11, lines 34-37].

As per claim 5, inherently, Oki discloses the logic element provides a static output level as the output clock signal when the activity flag value has the second value [col. 5, lines 25-29; col. 11, lines 34-37; col. 11, lines 38-47; col. 12, lines 14-21].

As to claims 11-15 basically are the operating step that are carried out by the corresponding elements in claims 1-5. Accordingly, claims 11-15 are rejected for the same reason as set forth for claims 1-5.

4. Claims 1, 3-5, 11 and 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Karibe et al. (Karibe), JP patent no. 64-48142.

As per claim 1, Karibe discloses a circuit comprising:

an activity latch [counter 5, fig. 1] for holding an activity flag value [abstract all]; and

a logic element [7, fig. 1] operatively coupled to the activity latch to receive an incoming clock signal and to provide an outgoing clock signal, the outgoing clock signal being dependent on the activity flag value [figures, 1; abstract all].

As per claim 3, Karibe discloses the logic element passes the incoming clock signal as the outgoing clock signal when the activity flag value has a first value [abstract all; emphasis added "has a not ZERO value"].

As per claim 4, Karibe discloses the logic element blocks the incoming clock signal when the activity flag value has a second value [abstract all; emphasis added "has a ZERO value"].

Application/Control Number: 09/636,115 Page 4

Art Unit: 2115

As per claim 5, inherently, Karibe discloses the logic element provides a static output level as the output clock signal when the activity flag value has the second value [abstract all].

As to claims 11 and 13-15 basically are the operating step that are carried out by the corresponding elements in claims 1 and 3-5. Accordingly, claims 11 and 13-15 are rejected for the same reason as set forth for claims 1 and 3-5.

- 5. Applicant's arguments filed on 9/20/2004 have been fully considered but are moot in view of new ground(s) of rejection.
- 6. In the remarks, applicants argued in substance that in **Oki** system fails to disclose an activity latch for holding an activity flag value.
- 7. The examiner respectfully traverses. In **Oki** system discloses an activity latch for holding an activity flag value [66, fig. 2; col. 5, lines 8-25]. Furthermore, **Karibe** discloses an activity latch for holding an activity flag value [abstract all]. Also see rejection above.
- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Senoh, US patent no. 5,914,580, discloses a circuit having an activity latch for holding an activity flag value, and controlling an output of a clock signal base on the activity flag value [fig. 2; col. 5, lines 19-26].

Art Unit: 2115

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chun Cao whose telephone number is 571-272-3664. The examiner can normally be reached on Monday-Friday from 7:30 am-4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas C. Lee can be reached on 571-272-3667. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is 571-272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Chun Cao
